

Exciting news from BreastCheck.

BreastCheck is pleased to announce that, starting December 2015, we will begin to replace our film mammography equipment with digital mammography systems. By April 2016, all mammograms at BreastCheck will be done on digital equipment. To learn how digital mammography benefits patient care, work environments, and workflow please visit us online.

For women screened on the mobile

With this transition, BreastCheck is excited to introduce two new mobile vehicles to the province. With these state of the art vehicles, BreastCheck will continue to offer breast cancer screening closer to home for women living in rural, and northern Manitoba. Each vehicle will travel to communities across the province providing a welcoming and comfortable mobile clinic experience. For your next mammogram appointment step on board!

Due to the introduction of our new mobile vehicles, our scheduled clinic dates in your community may have changed. Visit our website and use the interactive map to search for the screening location most convenient for you.

What's new?

- ▶ All mammograms at BreastCheck will be done on digital equipment.
- ▶ BreastCheck is excited to introduce two new mobile vehicles to the province.
- ▶ Our website has an interactive map where you can search for the clinic location most convenient for you.
